CAR PARK SMART ENTRY-EXIT SENSOR PROJECT

The smart ^{Car Park} Entry-Exit sensor detects when a car occupies a parking slot. Once a car occupies a slot, a monitor will display that ^{it} is occupied. The monitor should also show how many slots are left or if the parking lot is full.

This is a good project in Baguio because there are many locals and tourists that use ~~the~~ vehicles.

1. Discuss ethical concerns about computers expressing emotions

Computers and humans are different in making decisions. Computers decide based on logic and computation. With machine learning, they are able to give us information, suggest tips, and generate images. However, in order for machines to learn in the first place, they need the ideas of humans. Humans decide and form ideas with not just logic, but also other factors like emotions, which I believe computers ^{couldn't and shouldn't have.}

Emotions are felt and expressed as a response to changes in our body, the actions of other beings, and the environment. Computers cannot really experience these factors like humans and they respond with these through pure logic and computation. Trying to make computers feel and experience emotions may yield to ethical concerns as well. Computers can't learn ^{from information from selected people} properly as they ignore the complexities of humans. Humans themselves are unique express emotions and respond to situations differently. Moreover, computers may also experience errors which can lead to serious impacts like that one instance ^{where} AI advised someone to commit suicide. Another issue is that computers may not just do this because of an error but also do it intentionally.

In summary, there are issues and ethical concerns regarding granting computers the ability to feel emotion. We have the issue regarding how computers can learn how to feel emotions effectively considering the complexities of emotion and the difference of humans and computers. Also, the possibility of computers to intentionally or unintentionally cause negative impacts to humans is also to be considered.
