SUE, THE T-REX

Tags: Dinossaur, Prehistoric

These remains belonged to Sue, the largest tyrannosaurus in the world. She's a terrific specimen – the original skull, weighing 600 pounds and flashing 58 teeth, is on display along with information on the most notorious of dinosaurs.

For example, we tapped on the image of the dinosaur on the map. This should display a bigger image of the dinosaur on the left side of the screen, along with its name, a short description, and its tags. These tags are not interactable, but can be used to search a category of attractions.

Even though an attraction is located in a different floor, you can still look for it in the kiosk. You can also input its name or a part of the name instead of the tags. Only those shown in the recommendation menu can be interacted with to directly display the attraction.

PHOTOGRAPH OF ANDROMEDA

Tags: Galaxy, Extraterrestrial

M31, also well-known as the Andromeda Galaxy, is the nearest major galaxy to our own, the Milky Way.

Upon tapping a recommended attraction, the user will be directed to it. Also, whenever an attraction is being displayed, the map will lose opacity aside from the small image of the attraction. This is to put an emphasis on its location. However, when the user uses the search bar and keyboard, both of the sides below will lose opacity.

Finally, the buttons on the bottom left side of the screen indicate what floor the user is viewing. Here, the F1 circle is darkened, which means that the user is on the first floor. The user can also navigate to a different floor by tapping its respective button.

Summary:

- Tap on an attraction in the map to display an attraction
- Search on the search bar using tags, a name, or a part of the name, to be recommended some attractions
- The buttons below indicate the floor being displayed and can be used to navigate between floors
